TEKREVOL

WEBSITE REBUILD

Homepage copy v3

SEO, AEO and GEO spec · November 2026

About this version

- **Positioning:** TekRevol is a **software development company**. AI is a feature inside the software we build, not a service line. AI services move to a separate sister brand
- **Audience:** SMB and mid-market companies in the US first. Founders are no longer the target
- **Goal:** rank for "software development company" (SEO), be quoted in AI answers (AEO) and show up for US city searches (GEO). Every section moves a visitor toward a **project estimate** (see Offers and calls to action)
- **Builds on:** the approved homepage mockups (Oct 30), the blueprint (2026-11-06-website-blueprint-v1) and the custom software page rebuild
- `CONFIRM` = waiting on TekRevol (see the approvals and access request). Unconfirmed claims ship without the number

What changed from v2: audience moved from founders to SMB and mid-market; the AI pillar is now a feature; four service pillars; a "where are you starting from" router; a US offices band for local search; a definition paragraph and an answer-first FAQ for AI engines; one primary call to action.

Update 2026-11-12 (CTAs): "Start a project" is replaced with offers that name what the buyer gets: a written project estimate (primary), a systems review and a business case kit. See Offers and calls to action.

Page at a glance

#	Section	Ground	Job
0	Navigation	Carbon	Route to the four money pages, one button
1	Hero	Carbon	Category + promise + one action
2	Proof band	Graphite	Trust in three seconds
3	Who we build for	Pearl	Definition for search and AI engines; router by situation
4	What we build	Carbon	Four pillars, internal links to service pages
5	Results	Pearl	Numbers from named case studies
6	The Build Standard	Carbon	Why the output is enterprise grade; approver link
7	How we work	Pearl	Five steps from first reply to working software
8	Ways to work + cost	Carbon	Engagement models and planning ranges; champion pack
9	Industries (thin band)	Pearl	Links to industry pages
10	Client voices	Pearl	One video, one quote
11	US offices (thin band)	Graphite	Local search and trust
12	FAQ	Pearl	Answer-first questions for search and AI engines

#	Section	Ground	Job
13	Closing CTA + form	Carbon	Conversion
14	Footer	Carbon	Full link map, contact details

Nine full sections plus three thin bands, close to the eight-section target from the premium review.

Offers and calls to action

Rule: every button names what the buyer gets and when. No "Start a project", "Contact us" or "Learn more". Each offer is something only a real buyer wants, so the form filters for relevance on its own.

Offer	Button	What they get	When	Who it's for	Fields
Project estimate (primary)	Get a project estimate	A written estimate: cost range, timeline, team shape and a phased plan with what to build first	Within 3 business days `CONFIRM`	Has a project in mind (owner-operator, champion)	Name · work email · company · company size · what you need · project details · timeline · budget band (optional)
Systems review	Book a systems review	45 minutes with a senior architect on one system or workflow, then a written report: what to keep, fix, connect or rebuild, with cost ranges	Report within 5 business days `CONFIRM`	Has a problem, not yet a project	Name · work email · company · company size · system or workflow · what's going wrong
Business case kit	Get the business case kit	A forwardable pack: one-page business case template, cost ranges by project type, ROI worksheet, security overview, vendor checklist	Instant download	Champion building internal approval	Work email · company size

Pillar-specific versions (same form, different promise, for service pages):

- Modernization: **Get a modernization roadmap**: stages, risks and cost per stage for one legacy system
- Teams and support: **Get a team plan**: proposed roles, matching engineer profiles and a monthly cost, within 2 business days `CONFIRM`
- Web and mobile apps: **Get an app estimate**: features, platforms, cost range and timeline

Phase 2 (recommended): a **software cost estimator** on the pricing page. Six questions, an instant planning range on screen, and the detailed breakdown by email. Strong for SMB research traffic; needs a developer build, so not at launch.

How the offers keep leads relevant

- Work email required; personal addresses get a soft prompt ("Use your work email so we can send the estimate") `CONFIRM` with sales whether to block or allow

- Company size on every form. Leads under 20 employees or under $35K get an automated reply with the pricing guide and the kit, not a sales call. 20+ employees go straight to a senior person
- Estimate and review forms ask for project details or the system name: low-intent visitors drop off, buyers don't
- Thank-you pages confirm the deliverable and date, and offer a calendar link to walk through it

What TekRevol has to commit to `CONFIRM` with sales and delivery: who writes estimates and reports, the turnaround (3 and 5 business days proposed), and a short template for each so every lead gets the same quality. A promised deliverable that arrives late costs more trust than a vague button.

---

0. Navigation

Element	Copy
Logo	TekRevol mark + wordmark, links to /
Links	Services · Industries · Work · How we work · Pricing · Company
Button	**Get an estimate** (notched, Molten; short form of "Get a project estimate")
Services menu	Custom software development · Web and mobile apps · Modernization and integration · Teams and support · All services

- Sticky header after scroll, button always visible
- No phone number in the header (it lives in the footer and on the contact page)

---

1. Hero

Element	Copy
Label (mono)	SOFTWARE DEVELOPMENT COMPANY
H1	**Software development for the company you're becoming.**
Lead	TekRevol designs, builds and supports custom software, web and mobile apps for growing and mid-sized companies. Built to an enterprise standard, owned by you, with AI features where they pay off.
Primary button	Get a project estimate
Under the button (mono)	WRITTEN ESTIMATE IN 3 BUSINESS DAYS · COST, TIMELINE, TEAM `CONFIRM`
Text link	See our work →
Spec row (mono)	SINCE / 2018 `CONFIRM` · PRODUCTS DELIVERED / 800+ `CONFIRM` · CLUTCH / 4.8 from 83 reviews `CONFIRM` · US OFFICES / Houston · New York · San Francisco `CONFIRM`

H1 alternates (all keep "software development" in the H1):

- Custom software development for companies that have outgrown their tools.
- Software development built around how your business runs.

Notes

- The keyword sits in the visible H1, not only in the title tag: Google and AI engines both weight the H1
- Visual: molten-glass Strata render on the right (approved mockup). Ship it as an optimized image, not a heavy video, so it doesn't slow the first load
- No form in the hero

---

2. Proof band

Element	Copy
Label (mono)	TRUSTED BY TEAMS AT
Logos	5 to 6 approved client logos, white at 60% `CONFIRM` which logos are approved
Recognition line (mono)	CLUTCH TOP 1000 · 4.8 ON CLUTCH · [award 2023 or later] `CONFIRM`

- Real logos only, even optical size, no boxes. If fewer than four logos are approved, drop the logo row and keep the recognition line
- No award older than 2023 on the homepage

---

3. Who we build for

Element	Copy
Label (mono)	WHO WE BUILD FOR
H2	**Built for companies that run on software.**
Definition paragraph	TekRevol is a US software development company that builds custom software, web and mobile apps for small, mid-sized and mid-market businesses. Since 2018, our teams have delivered 800+ products for companies in healthcare, energy, manufacturing, retail and more. You own the code, and every release meets a published build standard. `CONFIRM` year and count
Router intro	Where are you starting from?

Router: four rows split by hairlines, each one a link.

#	Situation (buyer's words)	One line	Links to
01	Our tools no longer fit how we work	Spreadsheets, manual steps and subscriptions that cover 60% of what you need. We build the system around your process.	Custom software development

#	Situation (buyer's words)	One line	Links to
02	Our systems don't talk to each other	The same data typed into three tools, reports that take days. We connect what you already run.	Modernization and integration
03	Our core system is holding us back	A platform that's slow to change, costly to run or hard to hire for. We modernize it in stages, without stopping the business.	Modernization and integration
04	We need a product our customers use	A customer portal, a mobile app, a SaaS platform. We design, build and launch it, then keep it improving.	Web and mobile apps

Text link under the router: **Need more engineers on an existing team? See teams and support →**

Notes

- The definition paragraph is the sentence AI engines quote when someone asks "what is TekRevol" or "software development companies for mid-sized businesses". Keep it visible, plain and factual. The same sentence goes in llms.txt, the About page and the Organization schema description
- "Small" appears once here for search, never in a headline

---

4. What we build

Element	Copy
Label (mono)	WHAT WE BUILD
H2	**One team, from first sprint to scale.**
Lead	Four ways we work on your software. One accountable team across all of them.

Pillar	One line	Mono list under it (each a link)	Links to
01 Custom software development (featured, notch)	Business systems built around how your company runs.	Internal tools · Client portals · ERP and CRM · Workflow automation · AI features	/services/custom-software-development/
02 Web and mobile apps	Products your customers use every day, on every screen.	Web apps · iOS and Android · SaaS platforms · Product development	/services/web-and-mobile-apps/
03 Modernization and integration	Make the systems you already run faster, safer and connected.	Legacy modernization · System integration · Cloud migration · Data engineering	/services/modernization-and-integration/

Pillar	One line	Mono list under it (each a link)	Links to
04 Teams and support	Engineers who join your team, and support that keeps software healthy after launch.	Dedicated teams · Staff augmentation · Support and maintenance	`/services/teams-and-support/`

- Text link: **All services →**
- "AI features" under pillar 01 links to a short section on the custom software page: "Where AI helps inside your software" (document processing, smart search, forecasting, assistants inside your tools). AI-only projects are referred to the sister brand
- "Product development" replaces "MVP" in the visible list; the existing `/mvp-development` page stays live and is linked from it

---

5. Results

Element	Copy
Label (mono)	CLIENT RESULTS
H2	**Results our clients can measure.**

Five columns, hairline dividers. Mono industry label, client name, one large number, one line.

Industry	Client	Number	Line	Status
Energy	Kinder Morgan	46%	fewer reporting errors	`CONFIRM` (40% vs 46% in use)
Healthcare	Libido Health	80%	fewer session no-shows	In the case study body
Manufacturing	Rehkemper & Son	4 plants	quoting in one system	`CONFIRM` wording
Education	Schology	150%	better student retention	`CONFIRM`
Real estate	Houze Hookup	5M+	property reels played	`CONFIRM`

- Each column ends with "Read the case study →"
- Text link under the grid: **See all work →**
- Rule: only numbers that appear in the case study body. Anything unconfirmed is swapped for a confirmed case before launch

---

6. The Build Standard

Element	Copy
Label (mono)	THE BUILD STANDARD

Element	Copy
H2	**Young in approach. Enterprise in output.**
Lead	Every release passes the Ship Line: five layers checked, each signed off by a named owner, before anything reaches your users.

Strata diagram, five layers, one line each (top layer Molten):

Layer	Line `CONFIRM` with delivery
Experience	Accessibility and usability checked before launch
Product logic	Code review on every change, automated tests
Intelligence	AI features tested on real data, with human review where it matters
Data	Privacy by design, backups and retention you can audit
Infrastructure	Monitoring, uptime targets and cost controls from day one

- Mono line under the diagram: SECURITY AND COMPLIANCE RUN THROUGH EVERY LAYER · HIPAA · PCI DSS · GDPR EXPERIENCE `CONFIRM` certifications vs experience
- Text links: **Read the Build Standard →** · **Security and compliance →** (the approver page)
- Rule: only publish checks delivery follows today

---

7. How we work

Element	Copy
Label (mono)	HOW WE WORK
H2	**Working software every two weeks.**

Hairline timeline, five steps, one line each.

Step	Title	Line
01	Your written estimate	Cost range, timeline, team and what to build first, within 3 business days. `CONFIRM`
02	A walkthrough	30 minutes with the person who wrote it: what to build first, and what not to build.
03	A fixed quote	Scope, timeline and price locked in writing, after a short discovery.
04	The first release	A working version in your hands in weeks, not quarters.
05	Working software, every sprint	Demos every two weeks. You see progress, not status reports.

- Text link: **See how we work →**

8. Ways to work + cost

Element	Copy
Label (mono)	WAYS TO WORK
H2	**Pricing you can explain upstairs.**
Lead	Three ways to work with us. Planning ranges are public; your exact number comes from a fixed quote.

Model	Best when	Planning range `CONFIRM`
Fixed-scope project	You know what you need and want one price	From $35,000 for a first release; most mid-complexity projects $50,000 to $120,000
Dedicated team	Your roadmap is ongoing and priorities change	Monthly, per team `CONFIRM`
Support and evolution	Your software is live and needs to keep improving	Monthly plans `CONFIRM`

- Commitments (mono line): YOU OWN THE CODE AND IP · NDA BEFORE DISCOVERY · SPRINT REVIEWS EVERY TWO WEEKS · ONE ACCOUNTABLE LEAD
- Primary button: **Get a project estimate**
- Business case kit card (Graphite, beside the table): **Getting sign-off internally?** The business case kit has a one-page template your leadership will read, cost ranges, an ROI worksheet and our security overview. Button (secondary, outline): **Get the business case kit** (work email and company size only)
- Text link: **See full pricing** →

Why this section matters: the mid-market champion needs a number and a document to forward. Showing ranges filters out poor-fit leads and raises trust with the right ones.

9. Industries (thin band)

Element	Copy
Label (mono)	INDUSTRIES
Row of links	Healthcare · Energy · Manufacturing · Retail and restaurants · Education · Real estate

- One row, text links, a short proof line on hover or under each on mobile (for example "Healthcare: HIPAA platforms, 80% fewer no-shows")
- Only industries with a live page are links; others are plain text until the page exists

10. Client voices

Element	Copy
Label (mono)	CLIENT VOICES
H2	**In their words.**
Video	One client video, real name and title on the caption `CONFIRM` which client
Quote	Keith Cascarelli quote, exact wording from the Clutch review `CONFIRM`
Attribution	Keith Cascarelli, [title], [company] `CONFIRM`
Link	Read reviews on Clutch →

- No quote about "remote developers" or past bad vendors
- Video gets a text transcript on the page (accessibility, and engines can read it)

11. US offices (thin band)

Element	Copy
Label (mono)	OFFICES
H2 (small)	**Software development teams across the US.**
US row	Houston · Dallas · New York · San Francisco · Chicago · Miami · Washington, DC
Also serving	Also serving clients in the UK, UAE and Saudi Arabia.

- Each city links to its location page (`/locations/houston/` and so on). Location pages carry the full address, phone and map
- **List only offices with a real, staffed address** `CONFIRM`. Google Business Profiles for virtual offices get suspended, and conflicting addresses get repeated by AI engines
- Headquarters city must be one answer everywhere `CONFIRM` (today: Houston in the footer, Dallas in the schema, Austin in llms.txt)

12. FAQ

Element	Copy
Label (mono)	FAQ
H2	**Software development, answered.**

Every answer starts with a direct one or two sentence answer, then detail. Each links to a deeper page.

What does a software development company do?

A software development company designs, builds, tests and supports software for other businesses. At TekRevol that means custom business systems, web and mobile apps, modernization of existing systems, and engineering teams that join yours. → Services

How much does custom software development cost?

Most mid-complexity custom software costs $50,000 to $120,000 and takes four to nine months. A first release can start from $35,000, and large platforms run $350,000 and up. Scope, integrations, platforms and compliance move the price; you get a fixed quote after scoping. `CONFIRM` ranges → Pricing

How long does it take to build custom software?

A first working release usually takes 8 to 16 weeks. Full systems take four to nine months, delivered in two-week sprints so you use working software along the way. `CONFIRM` → How we work

Should we build custom software or buy an off-the-shelf tool?

Buy when a standard tool covers most of what you need. Build when you're paying for workarounds: the same data typed into several systems, reports that take days, or a workflow no tool supports. Many companies do both, with custom software connecting the tools they keep. → Custom software development

Can you work with our existing systems instead of replacing them?

Yes. Most of our work connects, extends or modernizes systems a company already runs, in stages, so the business keeps running while the software improves. → Modernization and integration

Who owns the code and intellectual property?

You do. You own the source code and IP from the first commit, and we sign an NDA before discovery. `CONFIRM` → How we work

How do you handle security and compliance?

Security is checked in every layer of our Build Standard. We have built software for HIPAA, PCI DSS and GDPR environments, with encryption, role-based access and a secure development process. `CONFIRM` certifications → Security and compliance

Do you build AI features into software?

Yes, where they pay off: document processing, smart search, forecasting and assistants inside your own tools, tested on real data before launch. For AI-first projects, our sister company [AI brand name] leads. `CONFIRM` name and link → Custom software development

Where is TekRevol located?

TekRevol is headquartered in [Houston, Texas] with offices in [Dallas, New York, San Francisco, Chicago, Miami and Washington, DC], and works with companies across the US, the UK and the Middle East. `CONFIRM` → Locations

What happens after launch?

We stay on. Support and evolution plans cover monitoring, fixes, updates and new features, so the software keeps up with the business. `CONFIRM` plans → Teams and support

- FAQPage schema on these ten questions. The answer text in the schema must match the visible text exactly
- Sticky left column with the H2 and a link: **Have a specific question? Get a project estimate and ask it there →**

---

13. Closing CTA + form

Element	Copy
Label (mono)	GET A PROJECT ESTIMATE
H2	**Know what it costs before you commit.**
Line	Tell us what you need. Within 3 business days you get a written estimate: cost range, timeline, team and what to build first. `CONFIRM`
What you get (mono list, left column)	COST RANGE · TIMELINE · TEAM SHAPE · PHASED PLAN · WHAT NOT TO BUILD
Form switch (two tabs above the form)	**I have a project** (estimate form, default) · **I have a system that isn't working** (systems review form)
Estimate fields	Name · Work email · Company · Company size (1 to 19 / 20 to 199 / 200 to 2,000 / 2,000+) · What do you need? (Custom software / Web or mobile app / Modernize or integrate / Extra engineers / Not sure yet) · Tell us about the project · Timeline (Within 3 months / 3 to 6 months / Later) · Budget range (optional: under $50K / $50K to $120K / $120K to $350K / $350K+)
Estimate button	**Get my project estimate**
Review fields	Name · Work email · Company · Company size · Which system or workflow? · What's going wrong?
Review button	**Book my systems review**
Under the button	No charge, no commitment. We sign an NDA before you share anything sensitive.
Side (mono)	INFO@TEKREVOL.COM · +1 [one US number] `CONFIRM`

Alternate H2s: "Get a straight number for your project." · "Let's build what comes next." (v3 original, kept as the softer option)

Form rules

- Labels above fields, not placeholder-only. Work email validated inline. No visible captcha (use an invisible check)

- Hidden fields: page URL, UTM source, medium, campaign, referrer, offer type
- Each offer has its own page and thank-you URL: `/get-an-estimate/` → `/get-an-estimate/thank-you/` · `/systems-review/` → `/systems-review/thank-you/` · `/business-case-kit/` → `/business-case-kit/thank-you/`
- GA4: `generate_lead` with an `offer` parameter (estimate / systems_review / business_case_kit), so leads can be compared by offer; CRM source and offer set on every lead
- Thank-you pages restate the deliverable and the date ("Your estimate arrives by Thursday"), a calendar link to book the walkthrough now, and the business case kit
- Routing: under 20 employees or under $35K budget → automated reply with the pricing guide and kit; 20+ employees → senior person, same day `CONFIRM`

---

14. Footer

Column	Links
Services	Custom software development · Web and mobile apps · Modernization and integration · Teams and support · Mobile app development · Web development · Product development
Industries	Healthcare · Energy · Manufacturing · Retail · Education · Real estate
Company	About · How we work · Build Standard · Security and compliance · Careers · Reviews · Contact
Resources	Work · Insights · Pricing · Business case kit · Systems review · Facts
Locations	Houston · Dallas · New York · San Francisco · Chicago · Miami · Washington, DC · London · Dubai · Riyadh `CONFIRM`
Contact	One US address (headquarters), one US phone, info@tekrevol.com `CONFIRM`
Sister brand	AI services: [AI brand name] → `CONFIRM`
Legal	Privacy · Terms · Cookie settings

- Existing legacy pages (Android, iPhone, Flutter, React Native, game development) stay live and linked from the relevant service pages, not crowded into the footer

---

SEO spec

Item	Value
URL	/
Title tag (57 characters)	Software Development Company for Growing Teams |
Title alternate (US focus)	Custom Software Development Company in the US |
Meta description (152 characters)	TekRevol builds custom software, web and mobile apps for growing and mid-sized US companies. 800+ products since 2018. Get a written estimate in 3 days. `CONFIRM` numbers

Item	Value
H1	Software development for the company you're becoming.
Primary keyword	software development company
Secondary keywords	custom software development company · software development company in the US · software development services · web and mobile app development company · legacy modernization services
Canonical	`https://www.tekrevol.com/`
Open Graph	Title = H1, description = meta, 1200 × 630 image of the hero render

Keyword placement: H1, title, meta, the definition paragraph and the FAQ. Every other heading reads like a person wrote it. The phrase "software development company" appears four to six times in visible text, no more.

Internal links from the homepage: four pillar pages, pricing, how we work, Build Standard, security, work index, five case studies, industry pages, location pages. Anchor text names the page ("custom software development", not "learn more").

Old homepage title ("Digital Transformation Company") and H1 ("Human Vision. Intelligent Technology. Exceptional Products.") are replaced. Watch Search Console for 4 weeks after launch for the "digital transformation company" queries.

Structured data (JSON-LD)

Type	What goes in it
Organization	name, legalName `CONFIRM`, url, logo, description (= definition paragraph), foundingDate 2018 `CONFIRM`, numberOfEmployees `CONFIRM`, address (headquarters only), telephone (one number), email, sameAs (Clutch, LinkedIn, other official profiles), knowsAbout (custom software development, web and mobile app development, legacy modernization, system integration)
WebSite	name, url
FAQPage	the ten questions above, text identical to the page
ItemList / OfferCatalog	the four service pillars with their URLs

- **Location data** lives on each location page as LocalBusiness (ProfessionalService) with that office's address and phone, not on the homepage
- **No AggregateRating** for TekRevol's own reviews on its own site: Google ignores self-serving review markup and it can look manipulative. Link to Clutch instead
- Today's schema shows a Dallas address (5301 Alpha Road) and a "Newark, CA" contact point. Both must be replaced with the confirmed headquarters

AEO, GEO and AI-agent spec

One set of facts everywhere. AI engines quote whatever they find most consistently. Today three sources disagree. Before launch, these must match on the homepage, About, Facts page, llms.txt, schema, Google Business Profile, Clutch and LinkedIn:

Fact	Today	Answer needed
Headquarters	Houston (footer) · Dallas (schema) · Austin (llms.txt)	One city and street address `CONFIRM`
Founded / experience	"10 Years" (homepage) · 2018 (schema, llms.txt)	Founded 2018; drop "10 years" `CONFIRM`
Products delivered	800+ (homepage, llms.txt) · 500+ (team drafts)	One number `CONFIRM`
Satisfaction	98% satisfaction (homepage) · 96% retention (llms.txt)	One metric, or drop both `CONFIRM`
Team size	200+ (llms.txt only)	Number `CONFIRM`
Offices	13 on the contact page; llms.txt calls several "no physical office"	Staffed offices only `CONFIRM`
Positioning	"Digital transformation company" (title) · "mobile app and software development company" (llms.txt)	"Software development company"

Content rules (Google helpful content + AI engines)

- People-first: every section answers something a buyer asks. No filler sections written for keywords
- Answer first: definition paragraph and every FAQ open with the direct answer in one or two sentences
- Experience and trust: named clients with numbers from published case studies, a named reviewer, leadership on the About page, a published Build Standard, a dated Facts page
- Specific over general: numbers, timelines and price ranges beat adjectives. No "world-class", "cutting-edge", "seamless"
- Visible text only: nothing important hidden in tabs that load later, sliders or images of text

For AI agents and crawlers

- Server-rendered HTML: the full copy, links and FAQ must be in the page source, not loaded by JavaScript
- `llms.txt` rewritten to match the confirmed facts, positioned as a software development company, linking to the four pillars, pricing, Build Standard, Facts and contact
- `/company/facts/`: one page of plain facts (founded, HQ, offices, team size, services, industries, certifications, contact), dated, with Organization schema

- robots.txt allows the search and answer crawlers (Googlebot, Bingbot, OAI-SearchBot, ChatGPT-User, PerplexityBot, ClaudeBot). Training crawlers (GPTBot, Google-Extended, CCBot) are a separate TekRevol decision `CONFIRM`
- Bing Webmaster Tools + IndexNow (Copilot and ChatGPT search draw on Bing)
- The project form is a plain HTML form with labeled fields, so an assistant acting for a buyer can read and complete it

GEO (local search)

- One Google Business Profile per staffed office, same name, address and phone as the location page
- Location pages with unique content: who that office serves, local clients or industries, the team, directions. No copy-paste city pages
- Consistent name, address and phone across Clutch, LinkedIn, Yelp, Apple Business Connect and Bing Places
- Ask happy clients for Google reviews on the headquarters profile

---

UX and performance standards

- **One primary action:** "Get a project estimate" in the hero, Ways to work and the close ("Get an estimate" in the header). The systems review and business case kit are the only secondary offers; everything else is a text link
- **Core Web Vitals targets:** LCP under 2.5 s, INP under 200 ms, CLS under 0.1 on mobile. Hero render as AVIF/WebP with set dimensions; fonts preloaded with `font-display: swap`
- **Accessibility (WCAG 2.2 AA):** text contrast 4.5:1 (check the grey on Carbon and the Molten button text), visible focus states, keyboard-usable menus and FAQ, alt text on logos, captions and transcript on video
- **Mobile:** spec row stacks 2 × 2; router rows become full-width tap targets (48 px minimum); results scroll as a list, not a carousel; sticky "Get an estimate" bar after the hero
- **Motion:** one motion moment (the Strata build in the hero). Respect `prefers-reduced-motion`
- **Tracking:** GA4 events for `generate_lead` (with the offer type), business case kit download, "See our work", pillar clicks, FAQ opens, phone and email clicks

---

Decisions for Sana

1. H1: recommended line or one of the two alternates
2. Title tag: "for Growing Teams" or "in the US"
3. Healthcare AI operations landing page: keep on TekRevol (as healthcare software) or move to the AI sister brand?
4. Sister brand: name and URL, and whether it appears in the footer from launch

5. Karachi delivery center: not mentioned on the homepage. Decide whether the About page names it (recommended: yes, as an engineering center, stated plainly)
6. Offers: approve the three offers and their promises (estimate in 3 business days, review report in 5), then get sales and delivery to commit to the turnaround
7. Personal email addresses on forms: soft prompt (recommended) or block

---

Next steps

- ☐ Sana: decisions 1 to 7
- ☐ TekRevol sales and delivery: name who writes estimates and review reports, and confirm the turnaround
- ☐ Claude: estimate, systems review and business case kit templates (so every lead gets the same quality), plus the kit itself
- ☐ TekRevol: answer the `CONFIRM` items (most are already in the approvals and access request; new ones: headquarters address, staffed offices, sister brand name, crawler policy)
- ☐ Claude: update the blueprint to four pillars (AI moves to a feature)
- ☐ Claude: rewrite llms.txt and the Facts page once facts are confirmed
- ☐ Claude: homepage design in Figma from the approved mockups with this copy
