SYSTEMS REVIEW

Systems review

[System name] for [Company] · [Month Year]

Prepared for [Name], [Title] · Reviewed by [Architect name], [Title] · Session held [date] · Report [date]

How to use this template (delete this line before sending): text in [square brackets] is replaced for every client. Send as PDF within 5 business days of the session `CONFIRM`. Be specific and fair: if an off-the-shelf tool is the right answer, say so. The writer's guide is in 2026-11-12-offer-playbook.

Summary

At a glance	Our view
What we reviewed	[e.g. Order management: the in-house system built in 2014, plus the spreadsheets around it]
Our verdict	**[Keep and fix / Connect / Modernize in stages / Replace]**
Biggest issue	[One line, e.g. "Orders are typed twice, into the system and into QuickBooks, about 25 hours a week"]
Recommended next move	[One line, e.g. "Connect the order system to QuickBooks first; leave the core system in place for now"]
Planning range for that move	[$X to $Y], about [N] weeks

What we looked at

- **Session:** 45 minutes with [names and roles]
- **Materials:** [screenshots, a screen-share walkthrough, sample exports, architecture notes]
- **Not covered:** [anything out of scope, e.g. "the payroll system"]

How it works today

[Three to six bullets or a numbered flow describing the current workflow in plain words. Example:]

1. [Sales enters the order in the order system]
2. [Operations re-keys it into a spreadsheet to plan production]
3. [Finance re-keys it again into QuickBooks to invoice]
4. [Reports are built by hand every Monday]

What it's costing you

Based on what your team told us. Your own numbers are better than ours; adjust them before you share this report.

Cost	Estimate	How we got it
Time	[25 hours a week]	[3 people × about 8 hours re-keying]
Errors	[about 4% of orders need correction]	[from your team's estimate]
Delay	[invoices go out 2 to 3 days after shipping]	[from the session]
Risk	[one person knows how the system works]	[from the session]

Findings

#	Finding	Impact	Priority
1	[Finding]	[What it costs or risks]	High
2	[Finding]	[Impact]	Medium
3	[Finding]	[Impact]	Medium
4	[Finding]	[Impact]	Low

Your options

Option	What it means	Range	Timeline	Makes sense when
Keep and fix	Fix the worst problems in the current system	[$X to $Y]	[N] weeks	[The system is sound and the issues are local]
Connect	Link it to the tools around it so data moves once	[$X to $Y]	[N] weeks	[Re-keying is the main cost]
Modernize in stages	Rebuild one part at a time, the business keeps running	[$X to $Y]	[N] months	[The system blocks growth or is hard to maintain]
Replace with an off-the-shelf tool	Move to [named product category]	[Licenses + setup]	[N] months	[A standard tool covers most of what you need]

Our recommendation

[One paragraph, answer first, with the reasoning. Example: "Connect first. Linking orders to QuickBooks removes most of the re-keying for a fraction of the cost of a rebuild, and it tells us how the core system behaves under change. Revisit modernization in six months with real numbers."]

First 90 days

- [Weeks 1 to 2: confirm access and data, agree scope]
- [Weeks 3 to 8: build and test the connection]

- [Weeks 9 to 12: go live, measure hours saved]

Quick wins you can do without us

- [A setting, report or process change the client can make this week]
- [A second quick win]

Next steps

1. **Talk it through (30 minutes):** go over this report with [Architect name]. [Booking link]
2. **Project estimate:** if you want to act on the recommendation, we'll turn it into a written estimate with a phased plan
3. **Fixed quote** after a short discovery

Everything you shared stays confidential. We sign an NDA before any deeper access `CONFIRM`.
