WEBSITE REBUILD

Approvals and access

What marketing needs to move ahead · November 2026

Why this document

We are rebuilding the full TekRevol website, following the healthcare landing page. The new site targets **SMB and mid-market companies** rather than founders. Its job is to bring in more qualified leads, build a steady pipeline, and turn more of those leads into clients.

Content and design are produced first. The developer joins once every page has final copy and approved designs, so the build runs without waiting on input.

To keep that schedule, marketing needs three things from TekRevol:

1. **Approvals:** decisions on direction, structure and what we publish
2. **Verification:** facts, numbers and claims checked before they go live
3. **Access and assets:** data, tools and files to build and measure the site

Anything that isn't confirmed ships without the claim. Nothing unverified goes live.

Summary

Section	Items	Who we need	Reply by
A. Approvals	8	Leadership	Wed 11 Nov
B. Verification	12	Sales, delivery, leadership	Fri 13 Nov
C. Access and assets	12	Marketing, IT, sales	Wed 11 Nov
D. Developer requests	3	Web developer	Fri 13 Nov

How to reply: add answers in the "Reply" column, or comment directly. Partial answers are welcome; we start with whatever arrives first.

Timeline

Week	What happens
9 Nov	Approvals, verification and access (this document)
9 to 20 Nov	Design system and two pilot page designs for review
16 Nov to 4 Dec	Copy and design for all launch pages
7 Dec	Full handoff package to the developer
Dec to Jan	Build and QA. Launch in early to mid January

A. Approvals

Each item has our recommendation. A simple "approved" is enough, or tell us what to change.

#	Decision	Recommendation	Reply
A1	Target audience	SMB and mid-market companies. Founders are no longer a target; founder pages (MVP, startup prototype) stay live for search traffic but leave the main menu and homepage	
A2	Company size bands	SMB: 20 to 199 employees (about $5M to $50M revenue). Mid-market: 200 to 2,000 employees (about $50M to $1B revenue). Sales to adjust if deals close in a different band	
A3	Five service areas	Custom software development · Web and mobile apps · Modernization and integration · AI and automation · Teams and support	
A4	Main menu	Services · Industries · Work · How we work · Pricing · Company · button "Start a project"	
A5	Launch pages (about 31)	Homepage, 5 service pages, 8 capability pages, pricing, security and compliance, 4 industry pages (healthcare, manufacturing, energy, retail), case studies, how we work, about, contact. Existing pages stay live; no URLs move at launch	
A6	Calls to action	One main button: **Start a project**. Two supporting offers: **Systems review** (30 minutes on one workflow or system, with written next steps) and **Business case pack** (a one-page summary buyers can share internally)	
A7	Publishing price ranges	Show planning ranges on the site, with a fixed quote after scoping. Buyers trust firms that show prices, and it filters out poor-fit leads	
A8	Review process	One named approver for copy and design, with a 2 working day turnaround per review round	

B. Verification

These facts appear (or will appear) on the site. Please confirm, correct or say "don't publish".

#	What to verify	What we have now	Who	Reply
B1	Price ranges	MVP $35K to $50K (8 to 16 weeks) · mid-complexity $50K to $120K (4 to 9 months) · enterprise $350K+ (9 to 18 months). Nothing between $120K and $350K. Also need ranges for apps, modernization and dedicated teams	Sales	
B2	Project count	Both "500+" and "800+" appear today. Which is correct?	Leadership	
B3	Years in business	Both "since 2018" and "10 years" appear. Which is correct?	Leadership	

#	What to verify	What we have now	Who	Reply
B4	Technology partners	AWS, Microsoft Azure, OpenAI, Anthropic. For each: formal partner (with a partner listing) or "we build on"?	Delivery	
B5	Certifications	Which are held as formal certifications (for example ISO 27001, SOC 2) and which are experience only (HIPAA, PCI DSS, GDPR)?	Delivery, IT	
B6	Case study numbers	Kinder Morgan: "40% efficiency" vs "46% / 95%" (both in use) · Rehkemper: quoting across 4 plants · Al Hussaini: 40+ outlets, need a result number · Schology: 100+ schools, 150% · Equitrip: launched in KSA and UAE · NDE Offshore: backend rewrite, need a result	Sales, delivery	
B7	Healthcare numbers	Nurse Practitioners 40% shorter waits · Kinekt 45% engagement or 30% faster responses · MiloCare+ 68% · Stop Vaping 65%. These appear only in page metadata, not in the case study body	Delivery	
B8	Client permissions	Which client logos may appear on the site? Which clients may be named with results, and which must stay anonymous?	Sales, leadership	
B9	Testimonials	Permission to use the Keith Cascarelli quote and video testimonials. Name, title and company for each	Sales	
B10	Reply time on forms	Can we promise a reply "within 6 hours" on working days? If not, what can we promise?	Sales	
B11	How delivery works	The Strata Method and the Build Standard: which checks are followed on every project today, and who signs off each stage (for example, CTO signs the release gate)	Delivery, CTO	
B12	Contracts and support	Standard terms we can state publicly: client owns code and IP, NDA before discovery, engagement models offered (fixed price, time and materials, dedicated team), support and maintenance plans after launch	Leadership, sales	

Awards and recognition: please confirm which awards are from 2023 or later. Older awards (such as Inc. 5000 2022) will move off the main pages.

C. Access and assets

Viewer or read-only access is enough unless noted.

#	What	Why we need it	Who	Reply
C1	Google Analytics 4 (Analyst access)	Baseline traffic and leads, and which pages convert	Marketing, IT	
C2	Google Search Console (Full user)	Which pages rank and bring traffic, so we protect them during the rebuild	Marketing, IT	
C3	Google Tag Manager (if used)	Set up form and button tracking	Marketing, IT	

#	What	Why we need it	Who	Reply
C4	CRM (name of the tool + read access)	Where leads go, which sources close, which fields forms should send	Sales	
C5	Website CMS (staging or read access)	Understand the current setup and page structure	IT, developer	
C6	Closed deals, last 12 months (no client names needed)	Company size, industry, service and deal size, to confirm who to target	Sales	
C7	Top 10 questions and objections from sales calls	Content for service pages, FAQs and the business case pack	Sales	
C8	Client logo files (SVG or high-res PNG)	Logo wall, only for approved clients (B8)	Marketing	
C9	Case study material	Screenshots, product images, short descriptions for the 6 to 8 case studies	Delivery, marketing	
C10	Leadership photos and short bios	About page and trust signals	Marketing	
C11	Video testimonials (original files)	Client voice sections	Marketing	
C12	Security material (policies, overview, questionnaire answers)	Security and compliance page for buyers who check vendor risk	IT, delivery	

D. Developer requests

These are small and help us now, before the main build.

#	Request	Why	Reply
D1	Install form tracking on the current site: a GA4 event for each form, a thank-you page per form, and source fields (UTM, page) sent to the CRM	Today there is no reliable lead tracking. We need a "before" number to show what the new site improves	
D2	Share the current stack: CMS, hosting, staging site, and any plugins or integrations	Shapes how designs and copy are handed over	
D3	Availability for the build from mid-December, and preferred handoff format (Figma, copy documents, SEO and tracking specs)	Lets us plan the build window	

What happens next

- As answers arrive, we update the plan and mark each item resolved
- Approvals in section A unlock design work; verification in section B unlocks final copy
- Next review: two pilot page designs (a service page and the custom software page), around 20 November
