TEKREVOL

SALES AND DELIVERY

Offer playbook

Estimates, systems reviews, business case kit · Internal

Internal. For TekRevol sales and delivery.

Why this matters

The new website replaces "Start a project" with three offers that promise something specific by a specific date. The offers bring better leads only if every lead gets the deliverable on time and at the same quality. A late or thin estimate loses the lead and the trust.

Offer	Promise on the site	Template
Project estimate	Written estimate in 3 business days	2026-11-12-project-estimate-template
Systems review	45-minute session, written report in 5 business days	2026-11-12-systems-review-report-template
Business case kit	Instant download	2026-11-12-business-case-kit

Spec for the website side: 2026-11-12-homepage-copy-v3, section "Offers and calls to action".

Owners and turnaround

`CONFIRM` every name and time with TekRevol leadership before launch.

Step	Owner	Time limit
First reply to a new lead (confirmation email)	Automated + sales rep	Within 1 business hour
Triage: route or nurture	Sales rep	Same business day
Write the estimate	Solution architect or tech lead	Draft by day 2
Review the estimate (numbers and tone)	Head of delivery or CTO delegate	Day 3, before noon
Send the estimate	Sales rep, from the estimator's name	Day 3
Book the systems review session	Sales rep	Within 3 business days of the request
Write the review report	Senior architect who ran the session	Within 5 business days of the session
Walkthrough calls	Estimator or architect + sales rep	Offered in every delivery email

Capacity check: at [N] estimates a week `CONFIRM`, who covers overflow? Agree a backup writer before launch.

Triage: who gets what

Lead looks like	Route
20+ employees, clear project, budget $35K+ or not stated	Full estimate, senior writer
20+ employees, problem but no project yet	Offer a systems review instead (reply template below)
Under 20 employees, or budget under $35K	Nurture: pricing guide + kit, no sales time. Upgrade if they reply with a fit project
Personal email, no company	Ask for company details once; nurture if no answer
Outside services (AI-first project)	Refer to the AI sister brand `CONFIRM` name
Job seekers, vendors, spam	Close in CRM, no reply

Writing rules for estimates and reports

- **Answer first.** Recommendation and range in the first half page
- **Use their words.** Quote the form; name their systems, teams and numbers
- **Ranges, not single numbers,** until discovery is done
- **Say what not to build.** It is what makes the estimate credible
- **Be fair about buying.** If an off-the-shelf tool fits, say so. It earns the next project
- **No filler:** no company history, no generic capability pages, no "world-class"
- **Tone:** senior, plain, calm. No rescue language about past vendors, no "offshore" or "outsourcing"
- **Length:** estimate 3 to 5 pages, review report 4 to 6 pages
- **Format:** PDF from the Word template, sent from the writer's own email, sales rep copied

Quality check before sending

- ☐ Recommendation and range are on page one
- ☐ Every [bracket] is replaced; no template text left
- ☐ Ranges match the published planning ranges, or the difference is explained
- ☐ Phases add up to the total range
- ☐ At least one "what we wouldn't build" item
- ☐ Assumptions and what moves the price are listed
- ☐ No client names in "similar work" without permission
- ☐ Walkthrough booking link works

- [ ] Reviewer has signed off

Email templates

1. Confirmation (automatic, within minutes)

Subject: Your project estimate is on its way

Hi [First name],

Thanks for the details on [project summary]. [Estimator name], one of our [solution architects], is reviewing it now. You'll have your written estimate by **[day, date]**: cost range, timeline, team and what we'd build first.

If anything's missing, we'll ask before then. Want to walk through it together when it lands? Book a time now: [link]

[Sales rep name]

TekRevol

2. Estimate delivery

Subject: Your estimate for [project name]

Hi [First name],

Attached is your estimate. The short version: we recommend [one-line recommendation], with a planning range of [$X to $Y] and a first working release in about [N] weeks.

The estimate also covers what we'd leave out for now, and why.

[Estimator name] can walk you through it in 30 minutes: [link]. If you're building the case internally, the business case kit has a one-page template and an ROI worksheet this estimate fits into: [link]

[Estimator name], [Title]

TekRevol

3. Follow-ups after delivery

- **Day 2:** "Did the estimate answer what you needed? Happy to adjust the scope options if something's off." + walkthrough link
- **Day 7:** one relevant case study, one line on why it's relevant + walkthrough link
- **Day 21:** "Is this still a priority this quarter? If timing has moved, tell us and we'll check in later." Then move to nurture

4. Problem, not a project (route to systems review)

Subject: A better first step for [system]

Hi [First name],

From what you've described, it's too early for a full estimate. A systems review would help more: 45 minutes with [Architect name] on [system], then a written report within 5 business days with what to keep, fix, connect or rebuild, and the cost of each.

Pick a time: [link]

5. Systems review: before the session

Send with the calendar invite. Ask for, where possible: a 5-minute screen recording of the workflow, rough numbers (hours a week, error rate), and which tools it connects to. Nothing confidential before an NDA.

6. Nurture (small or early leads)

Subject: Software pricing, before you talk to anyone

Hi [First name],

Thanks for reaching out. Here's what we share with every company planning a software project: our planning ranges and what moves them, plus a business case kit with an ROI worksheet. [links]

When the project is ready to scope, reply to this email and we'll send a written estimate.

Business case kit follow-up (download, no form beyond email)

- **Immediately:** email with the PDF link and one line: "When you have a project in mind, we'll turn it into a written estimate that fits section 1."
- **Day 3:** the ROI worksheet as a spreadsheet (`TekRevol-Software-ROI-Worksheet.xlsx`), with one line: "Fill in the shaded cells; it gives you payback and three-year value for your business case."
- **Day 10:** offer the project estimate or a systems review, whichever fits their company size

---

What to track in the CRM

Stage	Measure
Lead by offer	Estimate / systems review / kit, and company size band
Delivered on time	Share of estimates sent within 3 days and reports within 5
Walkthrough booked	Share of delivered estimates and reports
Discovery signed	Share of walkthroughs
Won	Deal value by offer and size band

Review monthly with marketing. If one offer brings many leads but few walkthroughs, change the offer, not the follow-up volume.

Next steps

- [ ] Leadership: name the owners and confirm the turnarounds (3 and 5 business days)
- [ ] Sales: confirm the triage thresholds (20 employees, $35K)
- [ ] Sales: confirm the planning ranges used in the kit and estimates
- [ ] Delivery: confirm the security answers in the kit (section 6)
- [x] Marketing: build the ROI worksheet as an Excel file (`offers/TekRevol-Software-ROI-Worksheet.xlsx`, builder `_build/roi-xlsx/`)
- [ ] Marketing: load email templates into the CRM, with offer type as a lead field
- [ ] Pilot: run 3 internal practice estimates on past projects before launch
